CYBER SECURITY ADVISORY 13/2019
MULTIPLE VULNERABILITIES REPORTED IN GOOGLE CHROME

1. It is learnt from reliable official source that multiple vulnerabilities have been reported in Google Chrome versions prior to 78.0.3904.87 which could allow remote attacker to bypass security restrictions, access sensitive information, cause denial of service condition, gain elevated privileges and execute arbitrary code on the targeted system.

2. In order to mitigate the vulnerabilities it is advised that all are to upgrade to Google Chrome version 78.0.3904.87 and for additional information please visit the URL mentioned below.

https://chromereleases.googleblog.com/2019/10/stable-channel-update-for-desktop_31.html

3. The advisory may be disseminated to all the concerned in the MoD. IT / EDP sections are advised to undertake patch management of affected systems accordingly.
